

# Worldline Testing Task – 1

Dhineshwaran C  
WDGET2024090

---

## Case Study: 3

**GitHub Link:** <https://github.com/Dhineshwaran-C/WorldlineTask1.git>

## Introduction:

This documentation outlines a Selenium WebDriver test suite developed to automate tasks on the Edureka platform. The test suite interacts with web elements to perform actions such as logging in, updating personal and career profiles, exploring blog content, and logging out. The suite is designed to validate the functionality of key features on the platform.

## Code Explanation:

### AppTest Class:

**Dependencies:** This class uses TestNG for test management and Apache POI for reading data from Excel files.

**WebDriver Initialization:** ChromeDriver is used to instantiate the WebDriver for Chrome browser.

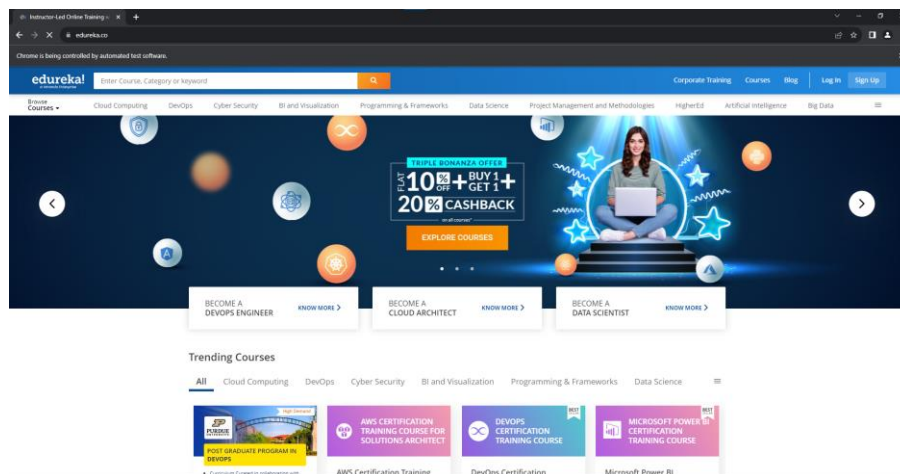

## Test Methods:

### open\_browser():

The 'open\_browser()' method initializes the WebDriver for Chrome by setting the system property to the path where the ChromeDriver executable is located. This ensures that Selenium can interact with the Chrome browser. After initialization, the browser window is maximized to ensure consistent testing environments.

```
@Test(priority=1)
Run | Debug
public void open_browser() {
    System.setProperty("webdriver.chrome.driver","G:\\worldline\\chromedriver-win64\\chromedriver-win64\\chromedriver.exe");
    driver = new ChromeDriver();
    wait = new WebDriverWait(driver, 5);
    driver.manage().window().maximize();
    driver.get("https://www.edureka.co/");
    System.out.println("Start Browser Executed");
    Reporter.log("Start Browser Executed");
}
```

When executing this function, it displays

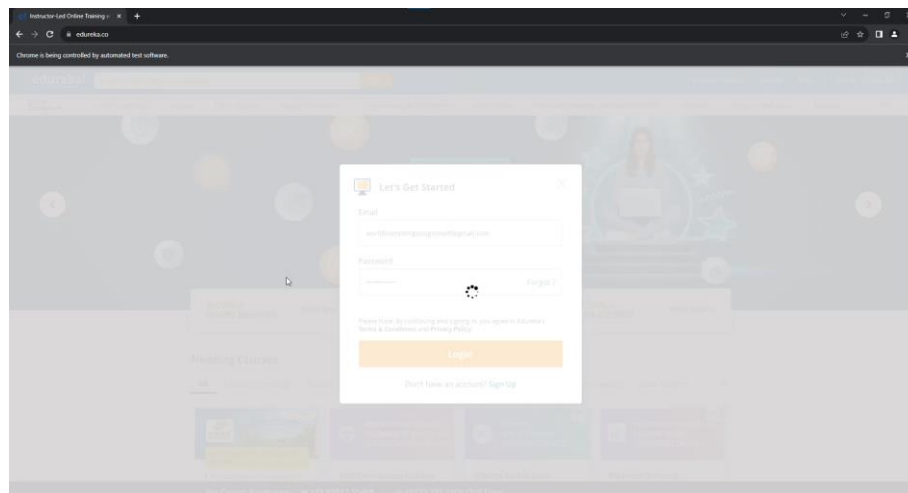

### login():

The 'login()' method, Selenium locates the login button on the Edureka website using an XPath expression. Once found, it simulates a click action to initiate the login process. It then locates the email and

password input fields, enters predefined credentials, and clicks the login button to authenticate the user.

```
@Test(dependsOnMethods = {"open_browser"})
Run | Debug
public void login() {
    WebElement login_page_button = driver.findElement(By.xpath("/html[1]/body[1]/header[1]/nav[1]/ul[1]/li[4]/span[1]"));
    login_page_button.click();
    WebElement email_input = driver.findElement(By.xpath("/html[1]/body[1]/div[6]/div[1]/div[1]/div[2]/div[3]/form[1]/div[1]/input[1]"));
    wait.until(ExpectedConditions.visibilityOf(email_input));
    email_input.sendKeys("worldlinetestingassignment@gmail.com");
    WebElement password_input = driver.findElement(By.xpath("/html[1]/body[1]/div[6]/div[1]/div[1]/div[2]/div[3]/form[1]/div[2]/input[1]"));
    password_input.sendKeys("Worldline@01");
    WebElement login_button = driver.findElement(By.xpath("/html[1]/body[1]/div[6]/div[1]/div[1]/div[2]/div[3]/form[1]/button[1]"));
    login_button.click();
    System.out.println("Login Executed");
    Reporter.Log("Login Executed");
}
```

When executing this function, it displays

### **personal\_profile():**

The 'personal\_profile()' method is responsible for navigating to the personal profile page on Edureka's platform. It interacts with the profile dropdown menu and selects the appropriate option to access the personal profile page. After navigation, it verifies that the URL matches the expected URL for the personal profile page, ensuring that the correct page is loaded.

```

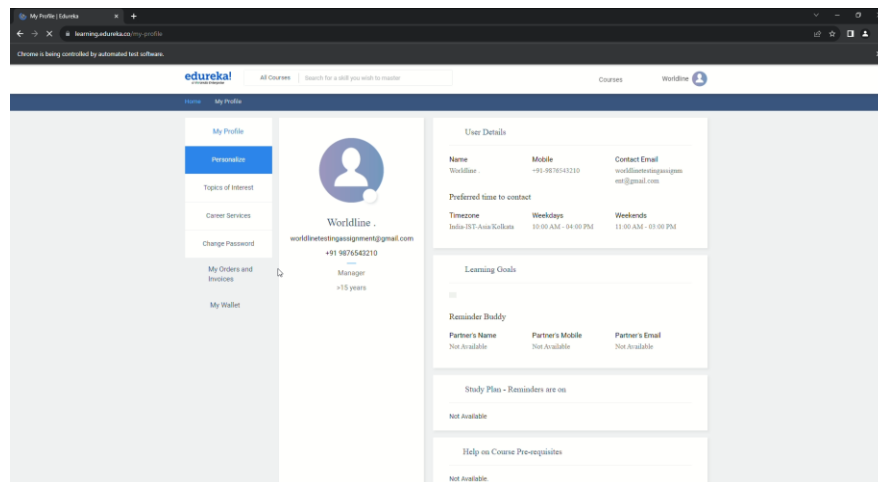

@Test(dependsOnMethods = {"login"})
Run | Debug
public void personal_profile() throws InterruptedException {
    Thread.sleep(2000);
    WebElement profileopen = driver.findElement(By.xpath("/html[1]/body[1]/header[1]/nav[1]/div[4]/ul[1]/li[6]"));
    profileopen.click();
    WebElement profileclick = driver.findElement(By.xpath("/html[1]/body[1]/header[1]/nav[1]/div[4]/ul[1]/li[6]/ul[1]/li[4]/a[1]"));
    profileclick.click();

    String expectedURL = "https://learning.edureka.co/my-profile";
    String actualURL = driver.getCurrentUrl();
    Assert.assertEquals(expectedURL, actualURL);

    System.out.println("Go to profile Executed");
    Reporter.log("Go to profile Executed");
}

```

When executing this function, it displays

## personal\_profile\_change():

The 'personal\_profile\_change()' method simulates the process of changing personal profile details. It locates the "Edit" button on the personal profile page and clicks it to enable editing. If a notification popup appears, it handles it by attempting to dismiss it. Then, it updates the name, years of experience, role, and designation fields with provided data. After making changes, it clicks the "Save and Continue" button and verifies that the URL changes to the personal profile page URL, ensuring that the changes are successfully saved. Data is fetched from the 'DataProvider' method.

```

@Test(dependsOnMethods = {"personal_profile"},dataProvider="testingdata")

public void personal_profile_change(String name,String years,String role,String designations) throws InterruptedException {
    WebElement user_details_edit = driver.findElement(By.id("other_details"));
    user_details_edit.click();
    System.out.println("Click Edit Personal Profile Executed");

    if(i==0) {
        try {
            WebElement deny_updates = driver.findElement(By.id("wrk-cancel"));
            wait.until(ExpectedConditions.visibilityOf(deny_updates));
            deny_updates.click();
            i--;
        } catch (NoSuchElementException e) {
            // Notification element not found or not visible
        }
    }

    String expectedURL = "https://learning.edureka.co/new-onboarding/userdetails?fromProfile=true&tab=userDetails";
    String actualURL = driver.getCurrentUrl();
    Assert.assertEquals(expectedURL,actualURL);

    WebElement change_name = driver.findElement(By.id("fullName"));
    change_name.clear();
    change_name.sendKeys(name);

    WebElement year_dropdown_icon_click = driver.findElement(By.xpath("//button[@type='button']][5]"));
    year_dropdown_icon_click.click();
    WebElement yearselect = driver.findElement(By.xpath("//ul[@class='available-items']/li[contains(text(),'"+years+"')]"));
    yearselect.click();

    WebElement role_icon_click = driver.findElement(By.xpath("//button[@type='button']][6]"));
    role_icon_click.click();
    WebElement rolesselect = driver.findElement(By.xpath("//ul[@class='available-items']/li[contains(text(),'"+role+"')]"));
    rolesselect.click();

    WebElement designation = driver.findElement(By.id("designation"));
    designation.clear();
    designation.sendKeys(designations);

    WebElement save_button = driver.findElement(By.xpath("//button[normalize-space()='Save and Continue']][1]"));
    save_button.click();

    Thread.sleep(2000);
    String expectedURL2 = "https://learning.edureka.co/my-profile";
    String actualURL2 = driver.getCurrentUrl();
    Assert.assertEquals(expectedURL2,actualURL2);

    System.out.println("Personal Profile details Change Executed");
    Reporter.log("Personal Profile details Change Executed");
}

```

When executing this function, it displays

## carrier\_profile\_change():

Similar to personal profile modification, the 'carrier\_profile\_change()' method updates career profile details. It navigates to the career profile editing page, updates fields such as company name, current job, and interested job using provided data. It handles any notification popups that may appear and ensures that changes are saved by verifying the URL transition.

```
public void carrier_profile_change(String companyName, String currentJob, String currentIndustry, String userSkill, String expectedURL) {
    Thread.sleep(2000);
    WebElement career_services_click = driver.findElement(By.xpath("//a[normalize-space()='Career Services']"));
    career_services_click.click();

    WebElement professional_details_edit = driver.findElement(By.xpath("//a[@id='professional_details']"));
    professional_details_edit.click();
    System.out.println("Go to Career Profile Executed");
    Reporter.log("Go to Career Profile Executed");

    Thread.sleep(2000);
    String expectedURL1 = "https://learning.edureka.co/onboarding/professionaldetails";
    String actualURL1 = driver.getCurrentUrl();
    Assert.assertEquals(expectedURL1, actualURL1);

    WebElement company_details = driver.findElement(By.name("companyName"));
    company_details.clear();
    company_details.sendKeys(companyName);

    WebElement current_job = driver.findElement(By.name("currentJob"));
    Select current_job_select = new Select(current_job);
    current_job_select.selectByVisibleText(currentJob);

    WebElement industry = driver.findElement(By.name("currentIndustry"));
    Select industry_select = new Select(industry);
    industry_select.selectByVisibleText(currentIndustry);

    WebElement skill = driver.findElement(By.name("userSkill"));
    skill.clear();
    skill.sendKeys(userSkill);

    WebElement next_button = driver.findElement(By.xpath("//button[normalize-space()='Next']"));
    next_button.click();

    Thread.sleep(2000);
    String expectedURL2 = "https://learning.edureka.co/onboarding/careerinterests";
    String actualURL2 = driver.getCurrentUrl();
    Assert.assertEquals(expectedURL2, actualURL2);

    WebElement interested_job = driver.findElement(By.name("interestedJob"));
    Select interested_job_select = new Select(interested_job);
    interested_job_select.selectByVisibleText(interestedJob);

    WebElement employment_type = driver.findElement(By.name("elementType"));
    Select employment_type_select = new Select(employment_type);
    employment_type_select.selectByVisibleText(jobType);

    WebElement current_salary = driver.findElement(By.name("lastDrawnSalary"));
    Select current_salary_select = new Select(current_salary);
    current_salary_select.selectByVisibleText(lastDrawnSalary);

    WebElement city = driver.findElement(By.name("currentCity"));
    city.clear();
    city.sendKeys(currentCity);

    if (true) {
        try {
            WebElement deny_updates = driver.findElement(By.id("web-cancel"));
            deny_updates.click();
        } catch (NoSuchElementException e) {
            // Notification element not found or not visible
        }
    }

    WebElement next_button_2 = driver.findElement(By.xpath("//button[normalize-space()='Next']"));
    next_button_2.click();

    Thread.sleep(2000);
    WebElement save_button_2 = driver.findElement(By.cssSelector("button[class='btn pull-right onboarding-primary-button']"));
    save_button_2.click();

    Thread.sleep(2000);
    String expectedURL3 = "https://learning.edureka.co/my-profile";
    String actualURL3 = driver.getCurrentUrl();
    Assert.assertEquals(expectedURL3, actualURL3);

    System.out.println("Professional details Change Executed");
    Reporter.log("Professional details Change Executed");
}
```

When executing this function, it changes the data and displays

The screenshot shows the Edureka career profile editing page. The sidebar on the left has three tabs: 'Professional Details' (selected), 'Career Interests', and 'Other Details'. The main content area contains a form with the following fields:

- Company Name: Worldnettraining
- Most Accurately Describes your Current Job Level: Entry Level
- Industry: BPO / Call Centre / ITES
- LinkedIn Profile: https://www.linkedin.com/
- Skills: Manage
- Upload Resume: Choose File (No file chosen)

At the bottom of the form, there is a green progress bar and a 'NEXT' button. The footer of the page includes contact information for Edureka.

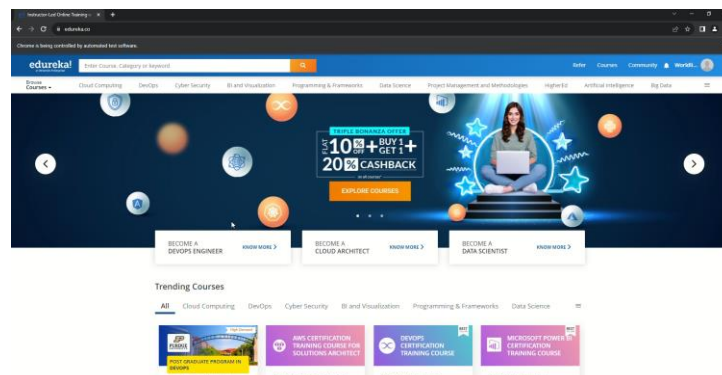

## goHome():

The 'goHome()' method navigates back to the homepage by clicking on the Eureka! logo in the navigation bar. It verifies that the URL matches the expected homepage URL, confirming successful navigation.

```
@Test(dependsOnMethods = {"carrier_profile_change"})
Run | Debug
public void goHome() throws InterruptedException {
    Thread.sleep(2000);
    driver.findElement(By.cssSelector("div[class='navbar-header edu_logo'] a")).click();
    String expectedURL = "https://www.edureka.co/";
    String actualURL = driver.getCurrentUrl();
    Assert.assertEquals(expectedURL, actualURL);
}
```

When executing this function, it displays

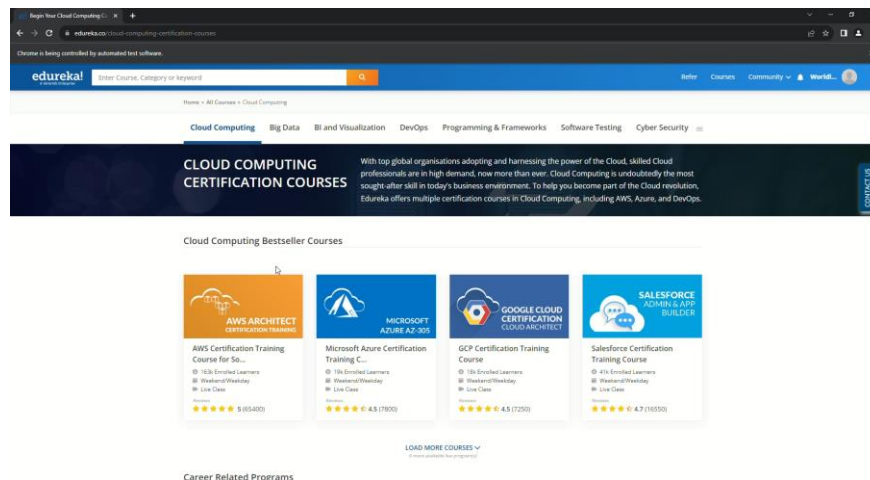

## exploreBlog():

The 'exploreBlog()' simulates user behavior by exploring a specific blog section related to cloud computing. It clicks through relevant links to reach the AWS certification training page and verifies the URL, ensuring that the correct blog content is accessed.

```
@Test(dependsOnMethods = {"goHome"})
Run | Debug
public void exploreBlog() throws InterruptedException {
    Thread.sleep(2000);
    WebElement cloud_computing = driver.findElement(By.linkText("Cloud Computing"));
    cloud_computing.click();
    WebElement aws = driver.findElement(By.xpath("//a[@aria-label='course_info']")[1]);
    aws.click();

    Thread.sleep(2000);
    String expectedURL = "https://www.edureka.co/aws-certification-training";
    String actualURL = driver.getCurrentUrl();
    Assert.assertEquals(expectedURL, actualURL);
    System.out.println("Exploring Blog");
    driver.findElement(By.cssSelector("a[aria-label='Go to Edureka Home Page']")).click();
}
```

When executing this function, it displays

After it clicks the AWS course, it displays

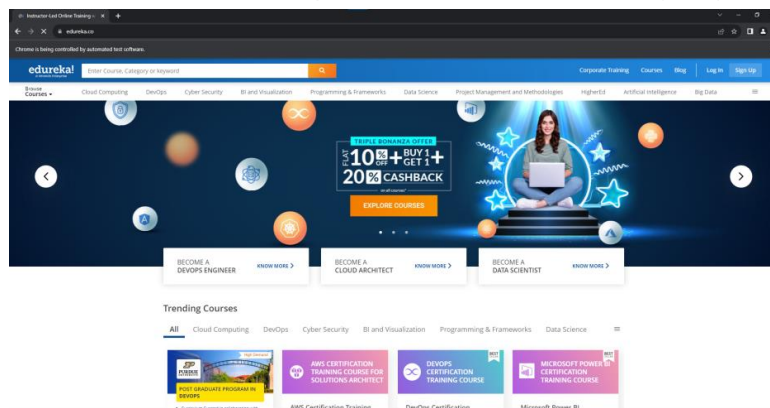

logout():

The 'logout()' completes the test scenario by logging out of the Edureka platform. It clicks on the profile dropdown menu, selects the "Log Out" option, and verifies the successful logout by checking the URL redirection to the homepage.

```
@Test(dependsOnMethods = {"exploreBlog"})
Run | Debug
public void logout() throws InterruptedException {
    Thread.sleep(2000);
    WebElement profileopen = driver.findElement(By.xpath("/html[1]/body[1]/header[1]/nav[1]/div[4]/ul[1]/li[6]"));
    profileopen.click();
    WebElement profileclick = driver.findElement(By.linkText("Log Out"));
    profileclick.click();
    System.out.println("Log Out Executed");
    Reporter.log("Log Out Executed");
}
```

When executing this function, it displays

## DataProviders:

The @DataProvider methods, testingData() and testingData2(), extract test data from Excel files for personal and career profile modification tests. They organize data into two-dimensional arrays, aligning rows with test cases and columns with parameters. These methods streamline test data management, enabling parameterized testing and enhancing test suite maintainability.

```
@DataProvider(name="testingdata")
public Object[][] testingData() {
    ReadExcelFile config = new ReadExcelFile("G:\\worldline\\taskSample.xlsx");

    int rows = config.getRowCount(0);
    int col = config.getColCount(0);

    Object[][] credentials = new Object[rows][col];

    for(int i=0; i<rows; i++) {
        for(int j=0; j<col; j++) {
            credentials[i][j] = config.getData(0, i+1, j);
        }
    }

    return credentials;
}

@DataProvider(name="testingdata2")
public Object[][] testingData2() {
    ReadExcelFile config = new ReadExcelFile("G:\\worldline\\taskSample.xlsx");

    int rows = config.getRowCount(1);
    int col = config.getColCount(1);

    Object[][] credentials = new Object[rows][col];

    for(int i=0; i<rows; i++) {
        for(int j=0; j<col; j++) {
            credentials[i][j] = config.getData(1, i+1, j);
        }
    }

    return credentials;
}
```

## ReadExcelFile Class:

### Constructor:

The constructor initializes the XSSFWorkbook object by loading the Excel file specified by the path provided as a parameter. This allows the class to read data from the Excel file during test execution.

### Data Retrieval:

The getData(int sheetnumber, int row, int column) method retrieves data from a specific cell in the Excel sheet identified by the sheet number, row, and column indices. It reads the cell value as a string and returns it.

getRowCount(int sheetnumber) returns the total number of rows in the specified sheet, facilitating iteration over rows during data retrieval.

getColCount(int sheetnumber) returns the total number of columns in the specified sheet, aiding in iterating over columns during data retrieval.

```
public class ReadExcelFile {
    XSSFWorkbook wb;
    XSSFSheet sheet;

    public ReadExcelFile(String excelPath) {
        try {
            File src = new File(excelPath);
            FileInputStream inp = new FileInputStream(src);
            wb = new XSSFWorkbook(inp);
        } catch (Exception e) {
            System.out.println(e.getMessage());
        }
    }

    public String getData(int sheetnumber, int row, int column) {
        sheet = wb.getSheetAt(sheetnumber);
        String data = sheet.getRow(row).getCell(column).getStringCellValue();
        return data;
    }

    public int getRowCount(int sheetnumber) {
        int rows = wb.getSheetAt(sheetnumber).getLastRowNum();
        return rows;
    }

    public int getColCount(int sheetnumber) {
        Row row = wb.getSheetAt(sheetnumber).getRow(0);
        int columns = 0;

        if (row != null) {
            int physicalNumberOfCells = row.getPhysicalNumberOfCells();
            for (int i = 0; i < physicalNumberOfCells; i++) {
                Cell cell = row.getCell(i);
                if (cell != null && cell.getCellType() != CellType.BLANK) {
                    columns++;
                }
            }
        }
        return columns;
    }
}
```

## Test Data:

### Personal Details data in Sheet 1:

Name	Years	Role	Designation
Worldlinetraining	2-4 years	BPO / Call Centre / ITES	Manager
World	4-7 years	Advertising / PR / MR / Event Management	Assistant Manager
line	7-10 years	Automobile / Auto Ancillary / Auto Components	CEO
training	10-15 years	Banking / Financial Services / Broking	Engineer
Worldline	>15 years	Consulting	Manager

### Professional Details data in Sheet 2:

CompanyName	CurrentJob	CurrentIndustry	UserSkill	InterestedJob	JobType	LastDrawnSalary	CurrentCity
Worldlinetraining	Entry Level	BPO / Call Centre / ITES	Manager	Project Management	Contract	3-5 LPA	Chennai
Worldline	Mid Management	Advertising / PR / MR / Event Management	Assistance Manager	Business Intelligence and Visualization	Permanent	5-10 LPA	Bangalore
World	Senior Management	Automobile / Auto Ancillary / Auto Components	CEO	Project Management	Both	10-15 LPA	Pune
Line	Top/Executive Management	Banking / Financial Services / Broking	Engineer	Blockchain	Contract	15-25 LPA	Mumbai
Training	Not Applicable - Fresher	Consulting	Consulting	Data Warehousing and ETL	Permanent	25-40 LPA	Delhi
